

1 Home Page With Dynamic Content: In this design for the homepage of GLCCN I propose to highlight **Connect, Share, Tools & Calculators and Eco Score** when a user arrives and they have not yet 'Logged In' to their user account.... And when the user is logged in the features area (inside the orange outline) will be replaced with the users latest **Research, Shared Research and EcoScore**.

2 The orange outline around the "User Account/Dashboard" page denotes that the user is "Logged In". Without logging in the user will not have access to this page. The first thing the user will see when logged in is the tabbed dashboard system including "Shared research, Tools and calculators and EcoScore" displayed prominently in the four major tabbed sections of **Air, Water, Habitat and Energy**.

3 After the user logs into their account the static content describing Share, Tools & Calculators, and Eco Score will be replaced with specific user created Shared research tools and their latest EcoScore achievements, as well as access to the 'Connect Map.'
